LEVELS OF AI ASSISTANCE

Level 1: Tab Completion

You write code on your own and get suggestions (Passive AI)

Examples:
- GitHub Copilot
- Tabnine
- VSCode IntelliSense

Your Role:
You write most code
You decide architecture
Full Control

Speed: ⚡
Understanding: 🧠🧠🧠🧠🧠
Control: ▇▇▇▇▇ 90%

Level 2: AI Assisted Editor

AI integrated into your code editor

Examples:
- Cursor
- Windsurf
- Kiro

Your Role:
You guide direction
Inline AI
Manual & generated

Speed: ⚡⚡⚡
Understanding: 🧠🧠🧠🧠
Control: ▇▇▇▇▒▒ 70%

Level 3: Conversational

Work with the AI agent(s) via chat (Agentic AI)

Examples:
- Claude Code
- Codex
- Aider

Your Role:
You're the architect
Collaborate with AI
You review & guide

Speed: ⚡⚡⚡⚡
Understanding: 🧠🧠🧠🧠
Control: ▇▇▇▒▒ 60%

👉 This is mostly where this course falls

Level 4: Autonomous Agents

Robot working alone at a desk

Examples:
- Devin
- AutoGPT
- Smol Developer

Your Role:
You set goals
AI does everything
You review results

Speed: ⚡⚡⚡⚡⚡
Understanding: 🧠🧠
Control: ▇▒▒▒▒ 30%

Level 5: Vibe Coding & One Shotting

Generate entire apps based on "vibe"

Examples:
- Lovable
- Bolt
- v0

Your Role:
AI creates structure
"Magic" solutions
Developer knows nothing

Speed: ⚡⚡⚡⚡⚡⚡
Understanding: 🧠
Control: ▇▒▒▒▒ 10%

⚠ Only suggested for prototyping

Level 1	Level 2	Level 3	Level 4	Level 5
tabnine	windsurf	CODEX	Devin	Lovable
codeium	KIRO	Gemini	Auto gpt	bolt
	↑ These can also be used for other levels. Chat interface + inline tools		smol	↑ These can be good for quick prototyping but NOT for production
