What Is Prisma?

Prisma is an ORM (Object-Relational Mapper) for Node.js and TypeScript. Instead of writing raw SQL queries, we interact with our database using TypeScript methods.

Prisma Gives Us:

- Type Safety
- Auto-Completion
- Migrations
- Prisma Studio

Our Model Schema

User

Item

ItemType

ItemTag

Tag

Collection

📁 prisma/schema.prisma

NextAuth has specific models/tables as well:

- Account
- Session
- VerificationToken

Important Prisma Commands:

Command	Description
`npx prisma migrate dev —name <name>`	Create and apply a new migration
`npx prisma migrate dev`	Apply pending migrations + detect drift
`npx prisma generate`	Regenerate Prisma Client after schema changes
Production	
`npx prisma migrate deploy`	Apply pending migrations (no prompts)
`npx prisma migrate resolve —applied <name>`	Mark migration as already applied
`npx prisma migrate resolve —rolled-back <name>`	Show SQL diff without creating files
Debugging / Status	Pull existing database schema into your schema file
`npx prisma migrate status`	Push schema to database without migration (no history)
`npx prisma db push`	Run your seed script
Reset (Destructive)	Drop database, reapply all migrations, run seed
