Let's automate our workflow with a new command:

/feature

Load a feature to the context/current-feature.md

```
# Load feature from spec file
/feature load some-spec.md

# Load feature from text
/feature load Add a contact link to the top nav
```

Start/implement the feature

```
# Read the current-feature.md and implement it
/feature start
```

Show what was created and explain the code

```
# Show the files created and explain the code
/feature explain
```

Review the feature and make sure all requirements were met

```
# Review the work done with the current-feature
/feature review
```

Mark feature complete and merge

```
# Mark feature complete, merge and delete branch
/feature complete
```
